WOOD CORBELS WITH METAL TRIM

*Geneva Wood Corbel Shown

Includes the award-winning
CORBEL RIB SUPPORT

WOOD CORBEL WITH METAL TRIM INSTALLATION INSTRUCTIONS

First, you will need to paint or stain your corbel. Follow the manufacturer's guidelines. Make sure the paint or stain is completely dry before moving on.

Using the provided adhesive, glue the metal trim pieces in place. See the "Assembled Wood Corbels with Metal Trim" photos below for trim placement on your specific corbel. Refer to the adhesive packaging for specific instructions on adhering the metal trim to the corbel.

To install the wood corbel using the Corbel Rib Support follow the steps below.

1. Choose the location of your Corbel Rib Support and mark a short centerline. The location must have sufficient structural support to hold a 375 pound load.
2. Using a level, make sure your centerline is vertically plumb. Extend the line so it will be visible through all the down flange holes of the bracket.
3. Place a square at the top of the cabinet or wall. Place the Corbel Rib Support firmly under it and centered on the line you drew. Mark your pilot holes.
4. Using a drill bit smaller than the fastener, drill out all the pilot holes.
5. Fasten the Corbel Rib Support to the wall or cabinet.
6. Place the corbel over the bracket and check the alignment and fit.
7. While holding the corbel in position under the bracket, mark the pilot holes on the top of the corbel.
8. Using a drill bit smaller than the fastener, drill out all the pilot holes.
9. Fasten the corbel to the Corbel Rib Support.
10. Check for level and plumb. Make any adjustments as needed.
11. Add your countertop surface material. Enjoy the strongest wood corbel support with a 375 pound carry capacity!
