ENCLUME SPECIFICALLY DISCLAIMS ANY AND ALL INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE PURCHASE OR USE OF ENCLUME'S PRODUCTS.**

ASSEMBLY and INSTALLATION INSTRUCTIONS for YOUR DR5LC RACK

Hardware included:

- 4 – 5/16" x 1/2" Button Head Screws
- 2 – 2" Lag Screws (for wood mount)
- 1 – 3/16" Allen Wrench

Components included:

- 2 – Low Ceiling Arm Brackets
- 2 – Rack Body Bases
- 1 – Hanging Grid
- 4 – Grid Brackets, EGB
- 12 – Straight Pot Hooks, EPHS

- 1) Place your rack components and hardware on a flat surface. Carefully compare these materials to those listed above. If you are missing an item please call us and we will promptly send you what you need.
- 2) First, locate the two low ceiling arm brackets. Using the four 5/16" x 1/2" button head screws attach the two arm brackets to the outside of the two rack body bases – as shown in the assembly diagram. Do not fully tighten the button head screws at this time. Note that the Enclume medallion should be facing up on the outside of one of the rack body bases.
- 3) Now place the rack on a flat surface to level and set the arms to straight -- then tighten all screws to final positions.
- 4) To mount your rack on a ceiling with wood joists above—holding your rack against the ceiling, drive the two lag screws through the holes in the arm brackets and into wood joists. These lag screws must be driven into the solid wood of the joists.
- 5) To mount your rack on a ceiling of dry wall or sheetrock -- Use the Toggler mounting set not included. Per the instructions, insert the two togglers into the ceiling and secure. Then holding your rack against the ceiling, insert the two machined screws through the holes in the arm brackets and into the Toggler mounting holes. The Toggler System will safely hold your rack and several hundred pounds of cookware. Toggler Kit Not Included Customer Supplies Own.
- 6) Place the four grid brackets over the sides of the rack, just inside each of the low ceiling arm brackets with the straight end of the brackets facing towards the inside of the rack. Next place the grid on top of the grid brackets and distribute the hooks on the rack.
- 7) Note: The grid should be placed on the grid brackets so that the grid crossbars that extend the width of grid are facing down. This will help to keep grid from sliding out of position when rack is in use.
- 8) **Your rack is now ready for use!** Hang your heavier items on the straight portion of the rack body or the center of the grid area.
- 9) Our hammered steel racks are finished with an industrial acrylic coating for years of protection to the rack. Cleaning is easily done with a damp cloth. Dry thoroughly after cleaning. If a touch-up is ever needed we recommend a commercial wax

It is important that your rack is assembled and installed correctly. If the unit is assembled, Installed or used incorrectly, it could become unstable and collapse, possibly causing injury.
