KV
KNAPE & VOGT.

1. Place sliding base assembly on cabinet floor, in desired position. Position front mounting strap against the back edge of the cabinet face frame. (If installing in a frameless cabinet, measure 1/2" to 3/4" back from front of cabinet opening, and align sliding base assembly parallel to cabinet opening.) Close door to make sure the assembly will not hold cabinet door open. Also, check to see if unit will clear the door opening when fully extended. Once position is determined, fasten in place using four mounting screws provided and a Phillips head screwdriver.

Optional Step: Mark placement of mounting holes with a pencil, remove sliding base assembly and drill pilot holes for fastening screws. Place sliding base assembly back into position and fasten with the provided screws.

IMPORTANT: The front and rear wire cages are different. Install the rear cage first.

2. Install the rear wire cage first. Fully extend sliding members out of the cabinet. Place the slotted holes on the cage onto the tabs on the left hand sliding member. (2A) Rest the cage on top of the clip retainers on the right hand sliding member, but, DO NOT PUSH DOWN. Close unit so that the wire cage is completely inside of the cabinet. Now, push down firmly on the right side of the wire cage, until it is fully seated into the clip retainers. (2B) Repeat the same process for the front wire cage. (Again, do not push the cage into the clip retainers until the cage is completely inside the cabinet.)

3. Install cage locking clip as shown.

4. Clip handle onto front of cage.
